## Business Understanding

# Business Overview

- ❑ In today's technology-driven era, businesses understand the importance of comprehending customer perceptions and adapting to market changes. Social media platforms like Twitter provide a valuable tool for tracking and analyzing user sentiments regarding different products.
- ❑ By utilizing sentiment analysis, businesses gain insights to refine strategies and meet evolving customer expectations.
- ❑ This understanding allows them to make informed decisions and drive customer satisfaction in a competitive market.

# Challenges

## Brand Reputation

Apple & Google would be interested in maintaining and/or improving their Brand Reputation.

## Product Development

Not understanding the customer preferences when it comes to the development of new products.

## Competitive Analysis

Monitor the sentiments that are related to their competitors.

# Proposed Solutions

## Brand Reputation

- Quality Customer Service
- Proactive Online Monitoring

## Product Development

- Prioritize customer feedback in the Research & Development process

## Competitive Analysis

- Monitor competitor sentiments and identify market gaps to differentiate your offerings.

# 02

## Project Overview

# Problem Statement

- ❏ Social media sentiments are important for businesses to understand customer perceptions.
- ❏ This sentiment analysis project focuses on analyzing Twitter data.
- ❏ The goal is to extract insights about the sentiments related to Apple and Google products mentioned in tweets.

...

# Problem Objectives

The **main** objective of this project is to create a model that when given a tweet or series of tweets and a product would determine how the user felt about that product.

1. Text Classifier – to accurately distinguish between positive, neutral, and negative sentiments, as well as point out why they are classified as such.
2. Competitive Analysis – Compare the sentiment towards Apple and Google products to identify any significant differences in public perception.
3. Give insights as to where the company can increase customer satisfaction.

# Success Metrics

The model performance of this project will be analyzed using the following performance metrics:

- ❑ Accuracy
- ❑ Precision and Recall
- ❑ F1 Score

For the multi-class classification, the recall macro average was used to compare the models.

## Data Understanding

# Data Understanding

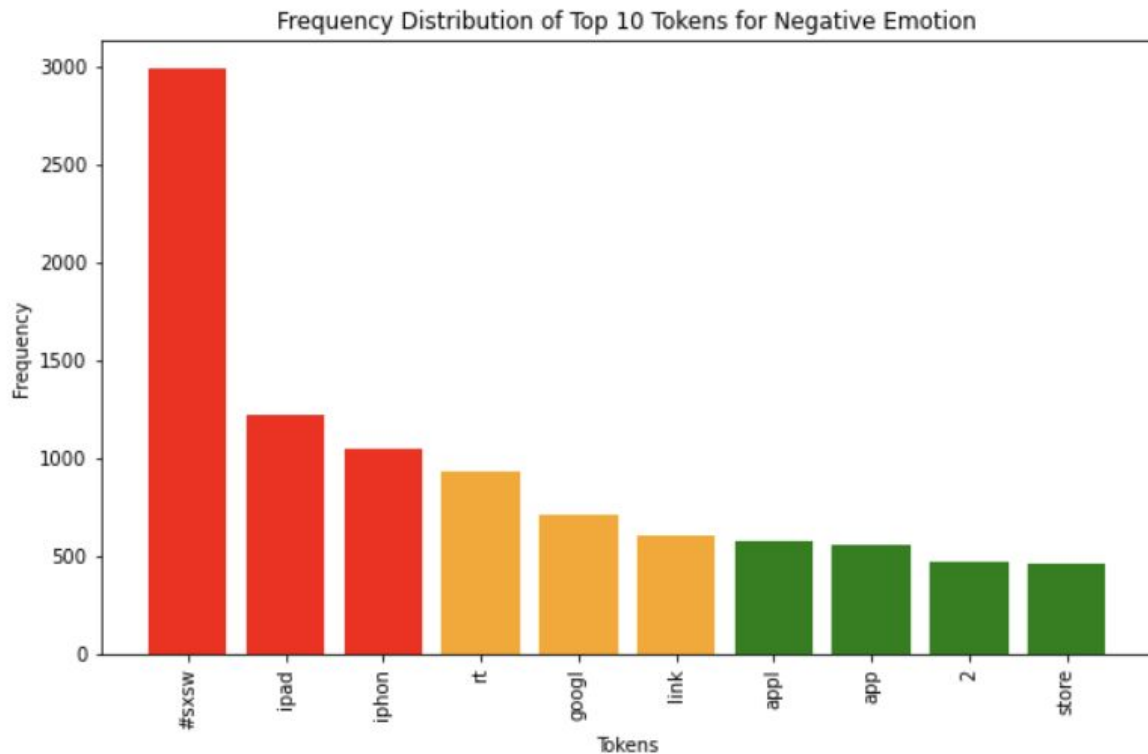

- ❏ The data was collected from DataWorld provided by CrowdFlower which has tweets about Apple and Google from the South by Southwest (SXSW) conference. There were 9093 rows and 3 Columns in the data.

|   | tweet_text   | emotion_in_tweet_is_directed_at | is_there_an_emotion_directed_at_a_brand_or_product |
|---|--|---------------------------------|--|
| 0 | .@wesley83 I have a 3G iPhone. After 3 hrs tweeting at #RISE_Austin, it was dead! I need to upgrade. Plugin stations at #SXSW.               | iPhone                          | Negative emotion                                   |
| 1 | @jessedee Know about @fludapp ? Awesome iPad/iPhone app that you'll likely appreciate for its design. Also, they're giving free Ts at #SXSW. | iPad or iPhone App              | Positive emotion                                   |
| 2 | @swonderlin Can not wait for #iPad 2 also. They should sale them down at #SXSW.  | iPad                            | Positive emotion                                   |
| 3 | @sxsw I hope this year's festival isn't as crashy as this year's iPhone app. #sxsw   | iPad or iPhone App              | Negative emotion                                   |
| 4 | @sxtxstate great stuff on Fri #SXSW: Marissa Mayer (Google), Tim O'Reilly (tech books/conferences) & Matt Mullenweg (Wordpress)              | Google                          | Positive emotion                                   |

Distribution of the top 10 words (tokens) used for positive emotion

Distribution of the top 10 words (tokens) used for negative emotion

# Data Understanding

Since the data set compares sentiments by brand for products from Google and Apple comparison of sentiments by brand yielded the following results shown above.

04

# Model Evaluation

# Model Evaluation

- ❑ The best performing model in the multiclass classification was the **Tuned Oversampled Logistic Regression** model
- ❑ Accuracy score : 67%
  - ❑ Testing : 53%
  - ❑ Training : 54%
- ❑ The XGBoost model had a test dataset prediction score of 65% and 85%  
However, its accuracy score decreased from 0.51 before and after GridSearchCV tuning.

# 05

## Recommendations & Conclusion

# Word on the street

## Apple

The battery life on the iPhone received negative feedback

The increase in size of the new iPad 2 was disapproved

iPhone trumped Android in the tweet thread on user preferences.

## Google

Android Operating System was a pain point for majority

Poor customer service was observed

Google Chrome was the preferred web browser for the majority.

# Recommendations

01

## Improve Customer Service

This would help improve brand reputation.

02

## Monitoring Social Media

Develop a social media strategy so that sentiments can be monitored & can remain informed

03

## Product Improvement

Based on the sentiments made, improve the quality of products/services, e.g iPhone battery life.

04

## Competitor Analysis

Extend the analysis to competitors in the industry, so as to understand customer perceptions and opportunities for differentiation

# Thanks!
